

YouTube Desktop App with Electron (Windows)

Step 1

Install Node.js (LTS), then verify:

```
node -v
```

```
npm -v
```

Step 2

Create the project:

```
mkdir YouTubeApp
```

```
cd YouTubeApp
```

```
npm init -y
```

Step 3

Install Electron:

```
npm install --save-dev electron
```

Step 4

Install Electron Builder:

```
npm install --save-dev electron-builder
```

Step 5

Create project structure:

```
YouTubeApp/  
assets/  
youtube.ico  
main.js  
package.json
```

Step 6

Replace package.json with the version we created containing start/build/dist scripts and electron-builder configuration.

Step 7

Create main.js using the latest version with:

- maximized window
- hidden menu bar
- custom icon
- persistent session
- Ctrl+Shift+N for incognito session

Step 8

Place a valid .ico file at assets/youtube.ico.

Step 9

Run:

```
npm start
```

Step 10

Build installer:

`npm run dist`

The installer will be generated in the dist folder.

Current Features

Native app, maximized startup, hidden menu bar, custom icon, persistent login, incognito window (Ctrl+Shift+N), Windows installer.

Future Improvements

Back/Forward/Refresh shortcuts, remember window position, media keys, system tray, auto start, auto update.
